

Getting Started with WinSPC 8.0 Video Series

- The videos below were developed for the release of WinSPC 8.0. Though they do not reflect new features and functionality added to WinSPC in later releases, they still provide a useful grounding. The videos automatically play in your browser when clicked. Note: You may experience some initial roughness when viewing these videos. That roughness fades after the introductory title sequence and does not interfere with the body of the video.
Using Individual Note, Assignable Cause, and Corrective Action Lists (9:43)
- This video explores: how to configure WinSPC's system settings for lists; how to create a list; what linking a list is and how to link a list; what list inheritance is; what an individual list looks like in the Data Collection window; how to block list inheritance; and how to distinguish between the different icons related to lists. Using Control Test Template Links (7:09)
- This video explores: how to link a control test template; what control test template inheritance is; an example of a linked and inherited control test template in the Data Collection window; how to block control test template inheritance; and how to distinguish between the different icons related to control test templates. Using the Variable Analyzer (5:24)
- This video explores: how to access the Variable Analyzer; and the major components of the Variable Analyzer. Using Report Templates (6:13)
- This video explores: the report templates included in WinSPC Version 8.0; how to preview and print reports based on a report template; how to create a report template; and the customization that can be performed on a report template. Using Report Books (3:34)
- This video explores how to: create and configure a report book; print a report from a report book; preview a report from a report book; and save, print or email a previewed report. (Note: In the upcoming release of WinSPC 10, the term report book is scheduled to be replaced by, simply, report.)
Understanding DataSets (4:26)

This video explores: the value of data sets; the pre-built data sets that ship with WinSPC; the filters that can be configured for data sets; and what can be done with a data set after it has been configured.
